TECHNICAL DOCUMENTATION

QUIET ATTIC FILMS RECORDS

System Introduction

The system of quiet attic films is a database solution made in order to organize and manage data in the concept of productions done in the company.

The system is made with a help of implementing a relational database using Microsoft SQL Server Management studio 2014 (SSMS) and the User interface design connected to the database using Microsoft Visual Studio 2013.

This system provides and satisfies the following user requirements.

- Organize and maintain data on the concept of production.
- Determine what productions belong to client and which client hired a production.
- Determine which production will be done at a particular location.
- Determine which production use a recognized property at a time.
- Insert, Update and Delete data in the entities.

The system provides management of the following entities.

- Client
- Production
- Staff
- Location
- Property

Requirements Specifications

Hardware requirements

The relational database management system requires the following hardware requirements as it is to be run using Microsoft SQL server.

- A processor with minimum of processing speed 1.5GHz 64-bit, a processor over 2.0GHz with multi cores is recommended to run Microsoft SQL Server and the created relational database system.
- A minimum system RAM of 2GB and 4GB RAM is recommended depending to the workload of Quiet Attic Films.
- A hard disk drive space of over 15 GB (8 GB to install Microsoft SQL server + additional space over 7GB to store databases, backups and other data of Quiet Attic Films)
- An effective Network Connection in order to communicate with clients and access other resources online.

Software requirements

-These are the requirements which are required for the relational database management system of quiet attic films.

- Microsoft SQL Server; Which includes the software requirements below
- Windows OS -Widows10 /8/ 8.1/ 7 (64-bit)
- Microsoft .NET framework 4.8 or later.
- SQL Server Management Studio (SSMS) for database administrations.
- SQL Server Data Tools (SSDT) for database project developments.
- Microsoft Visual Studio for further maintenances.

The Graphical User Interface System of Quiet Attic Films

The GUI system designed using Microsoft Visual studio is mapped below.

Startup Page

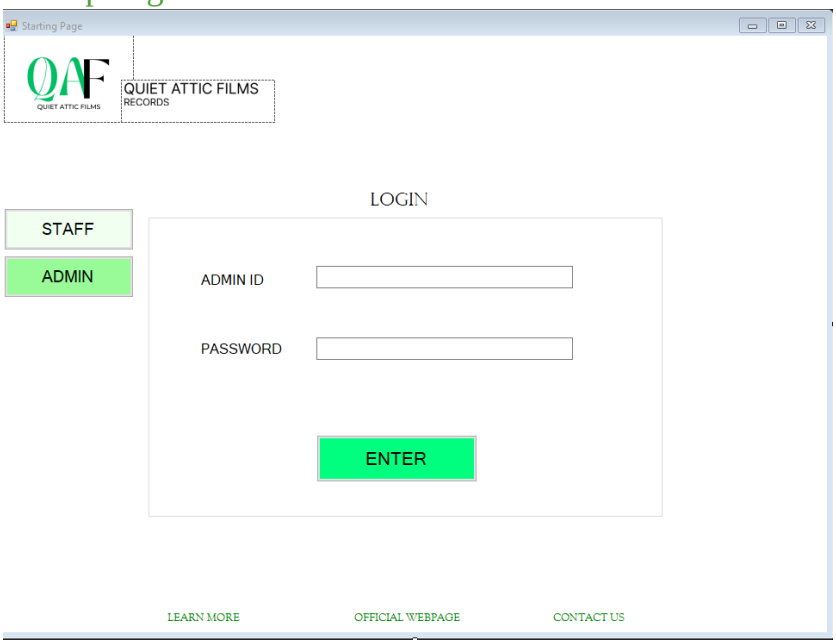

Figure 1 - Interface startup page

This is the startup page for quiet attic films interface. The user will be able to login here.

Selection page

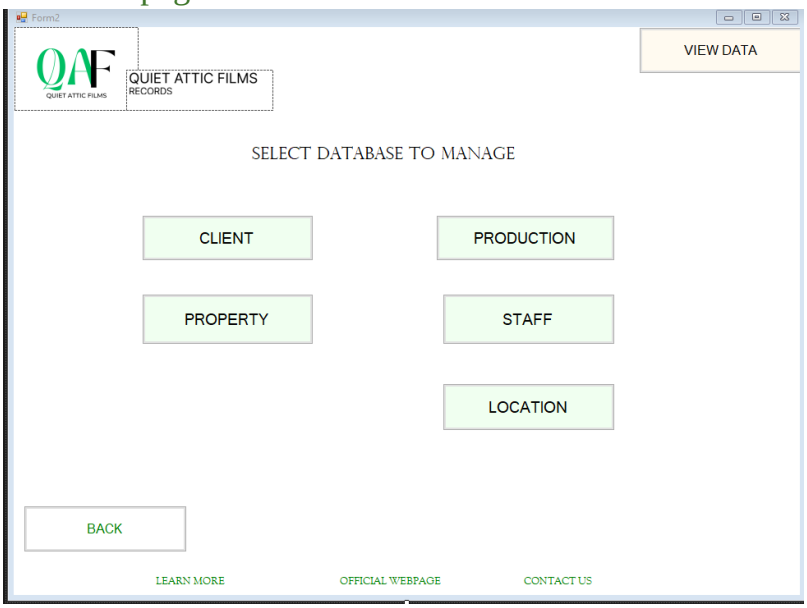

Figure 2 - interface Selection page

This page is where the user can select which entity to manage.

View data page

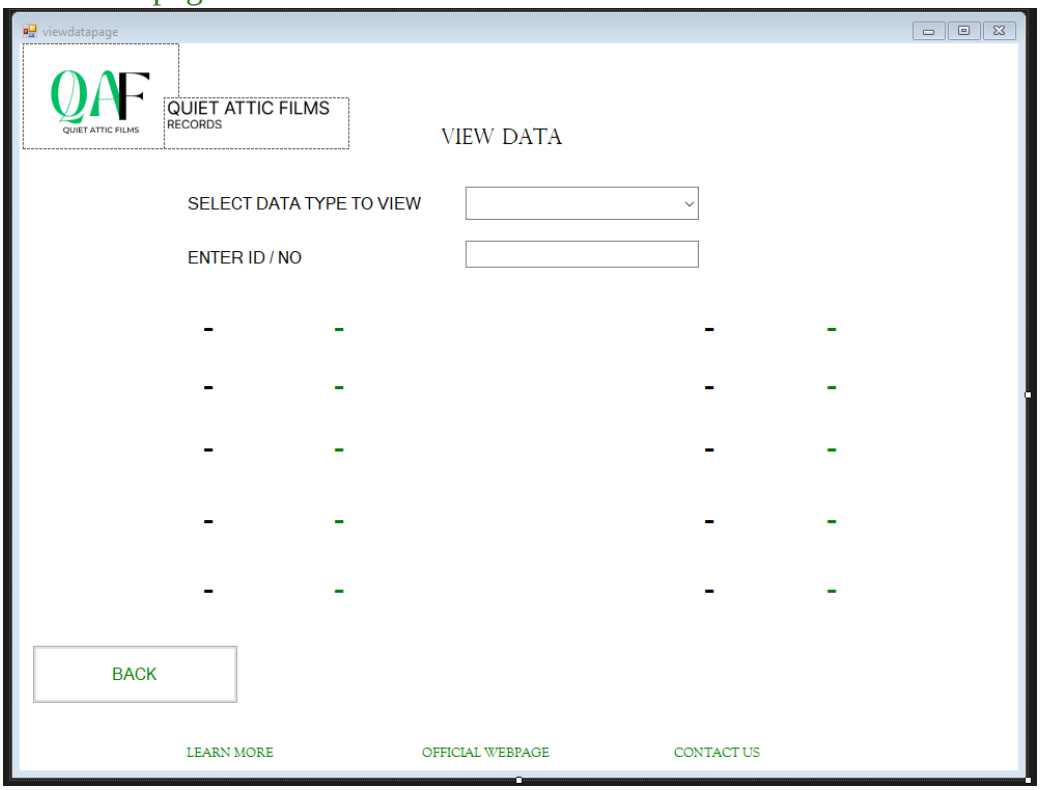

Figure 3 - View page interface

This page will be displayed if “View page” button is clicked from the selection page. The user can select the desired entity and view desired data here.

Manage Clients page

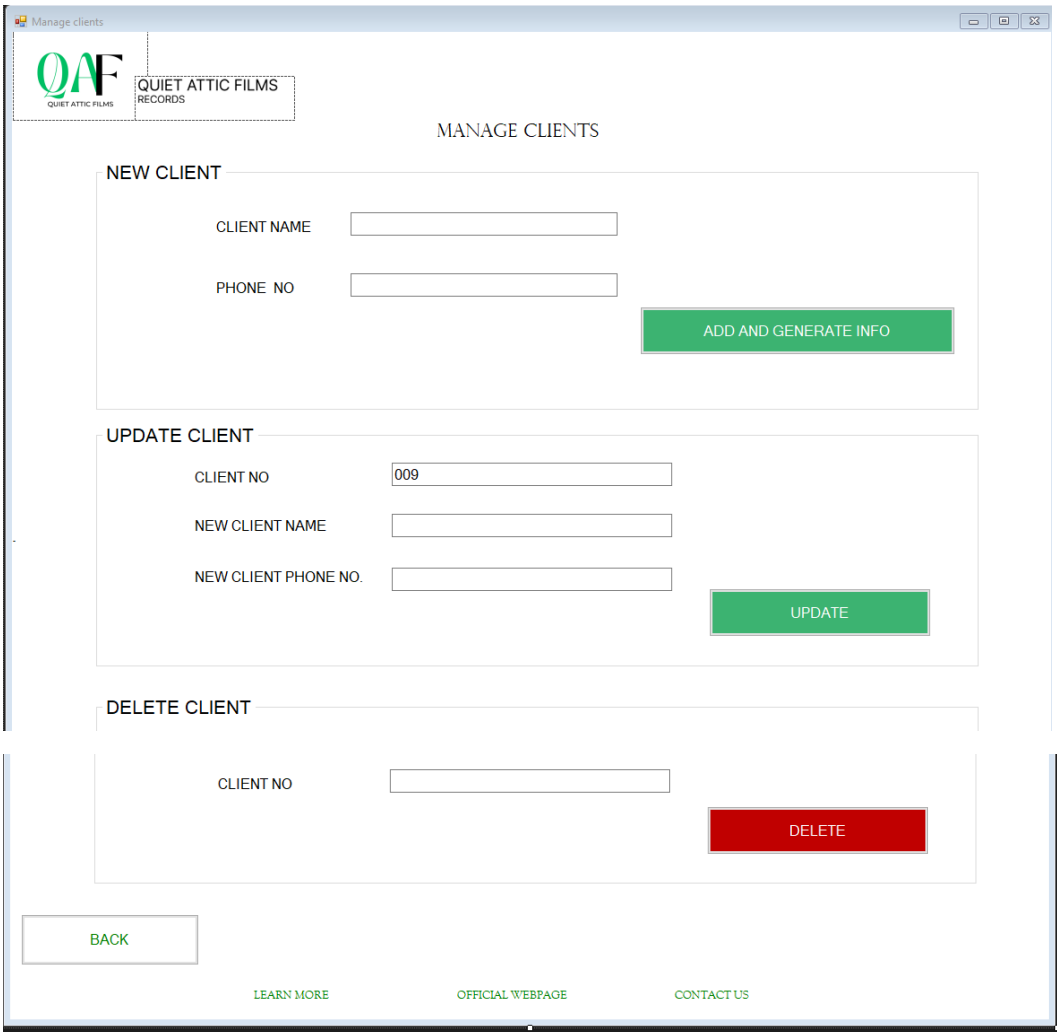

Figure 4 - Manage Clients page

Here the user can manage client data in the database.

Manage production page

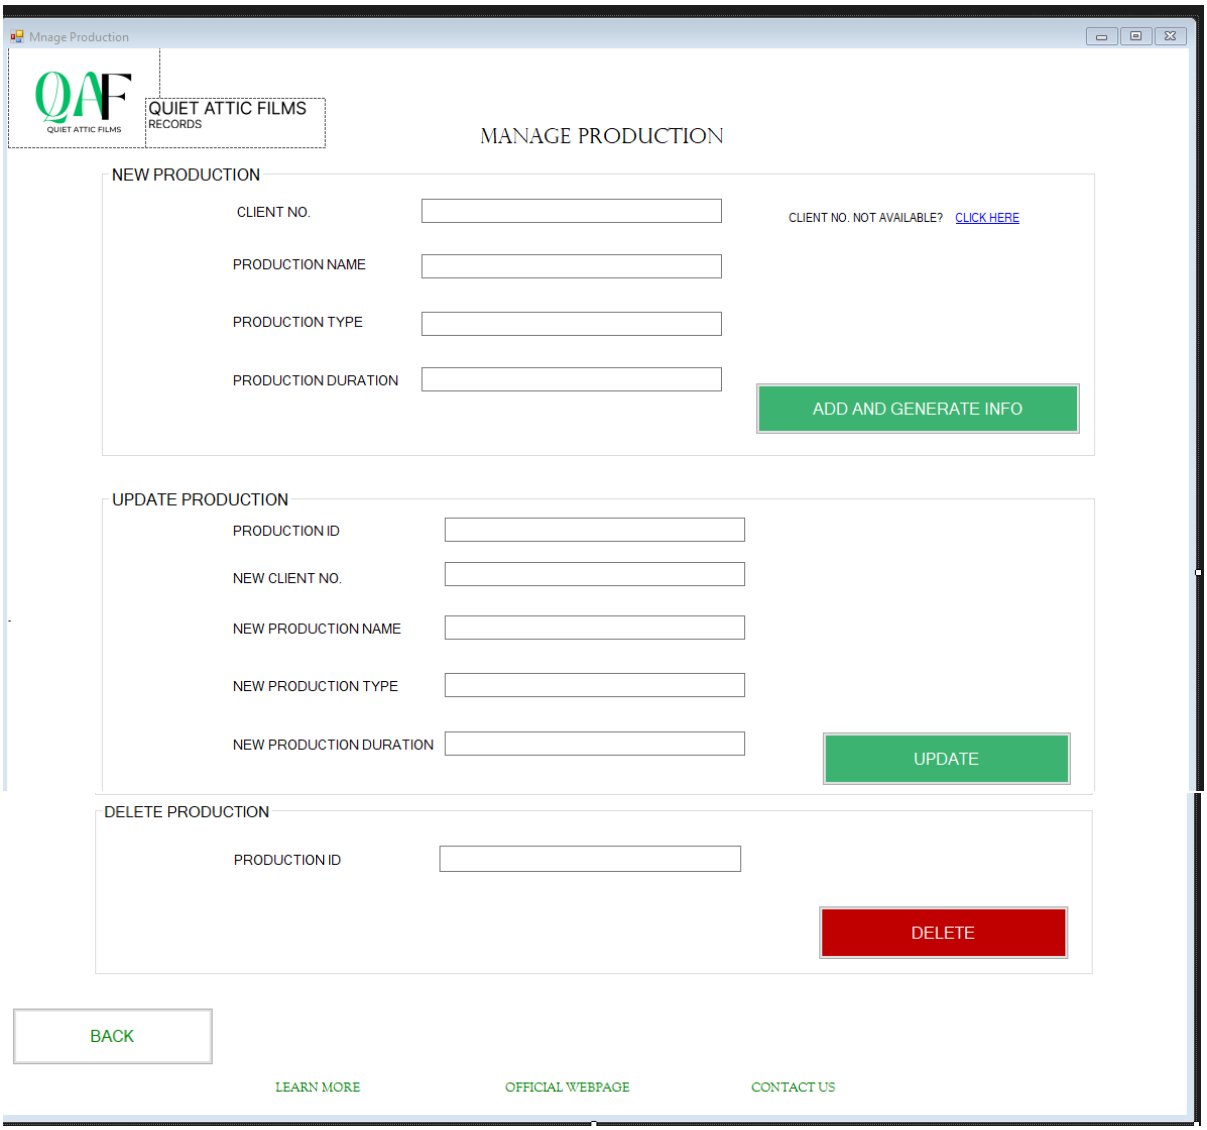

Figure 5 - Manage productions page

Here the user can manage production data in the database.

Manage Staff Page

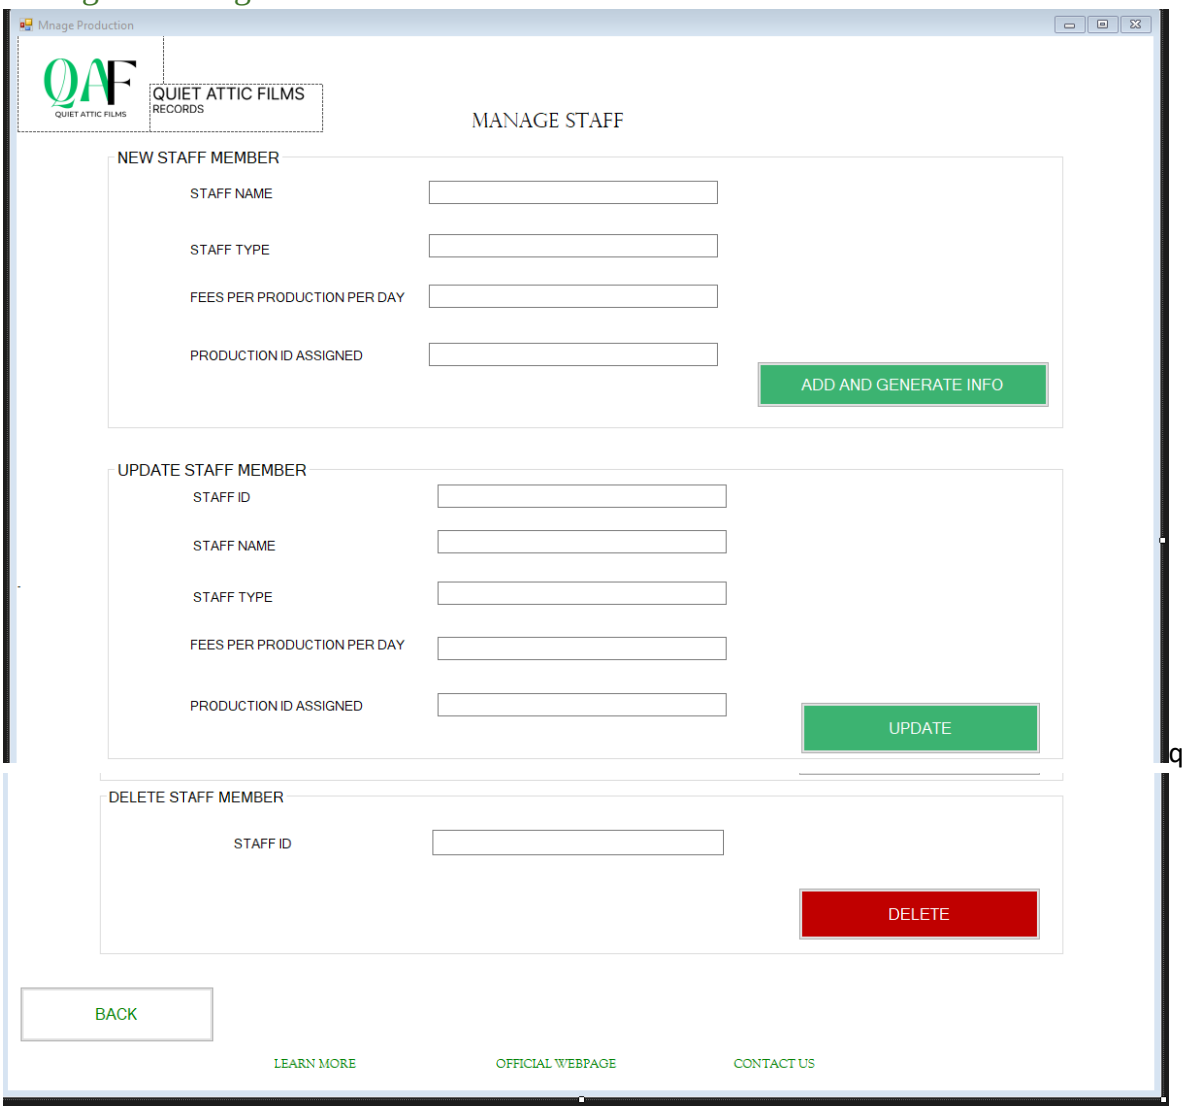

Figure 6- Manage Staff Page

Here the user can manage staff data in the database.

Manage Location Page

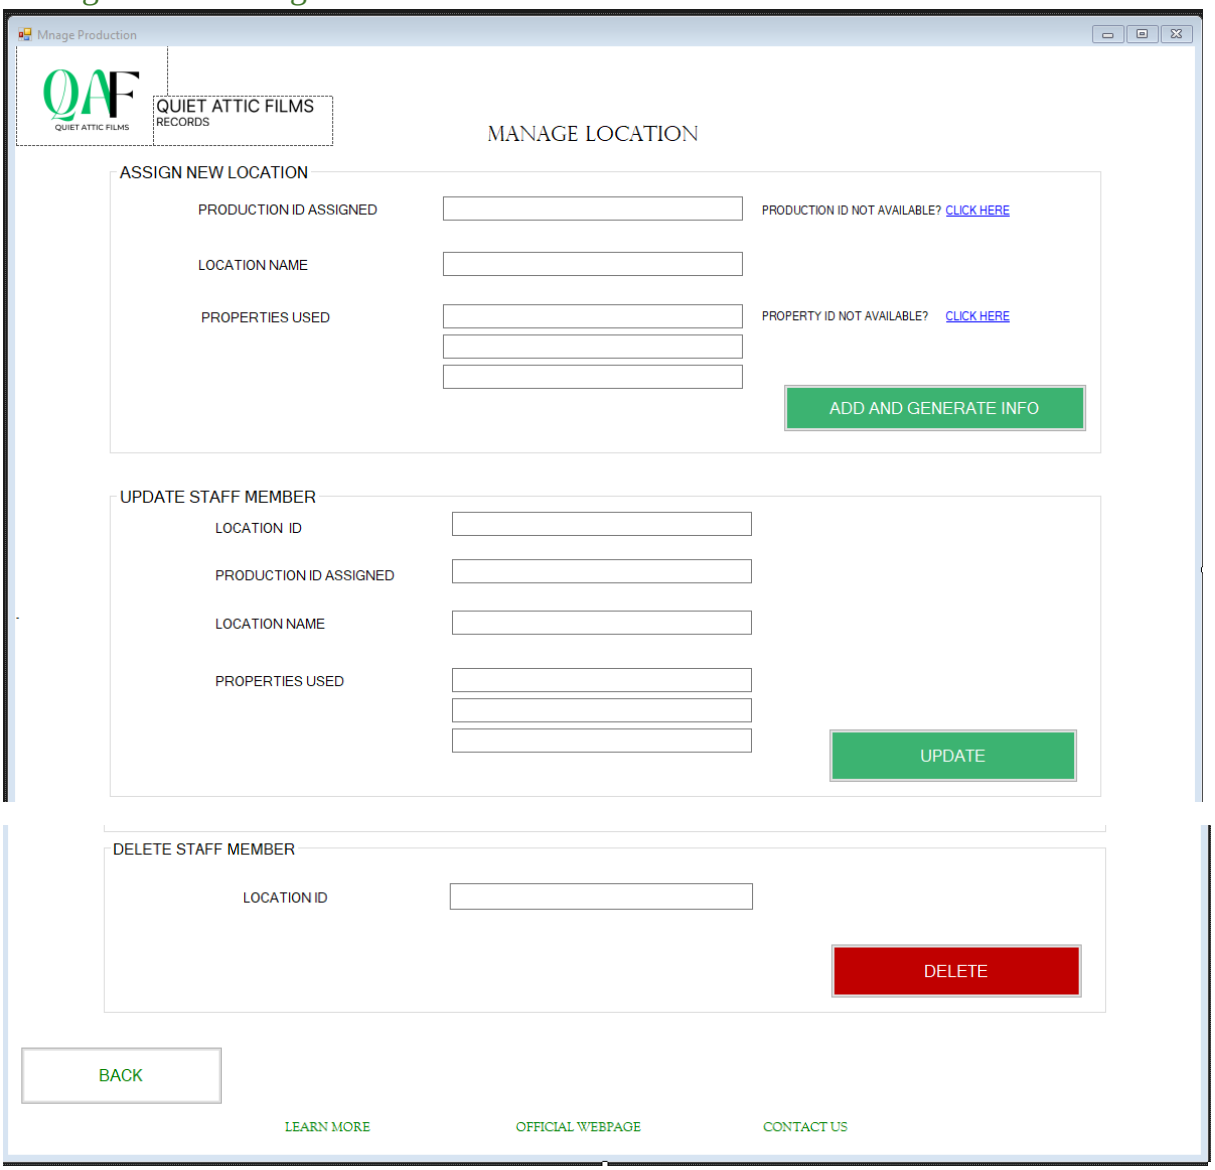

Figure 7 - Manage Location Page

Here the user can manage location data in the database.

Manage Property Page

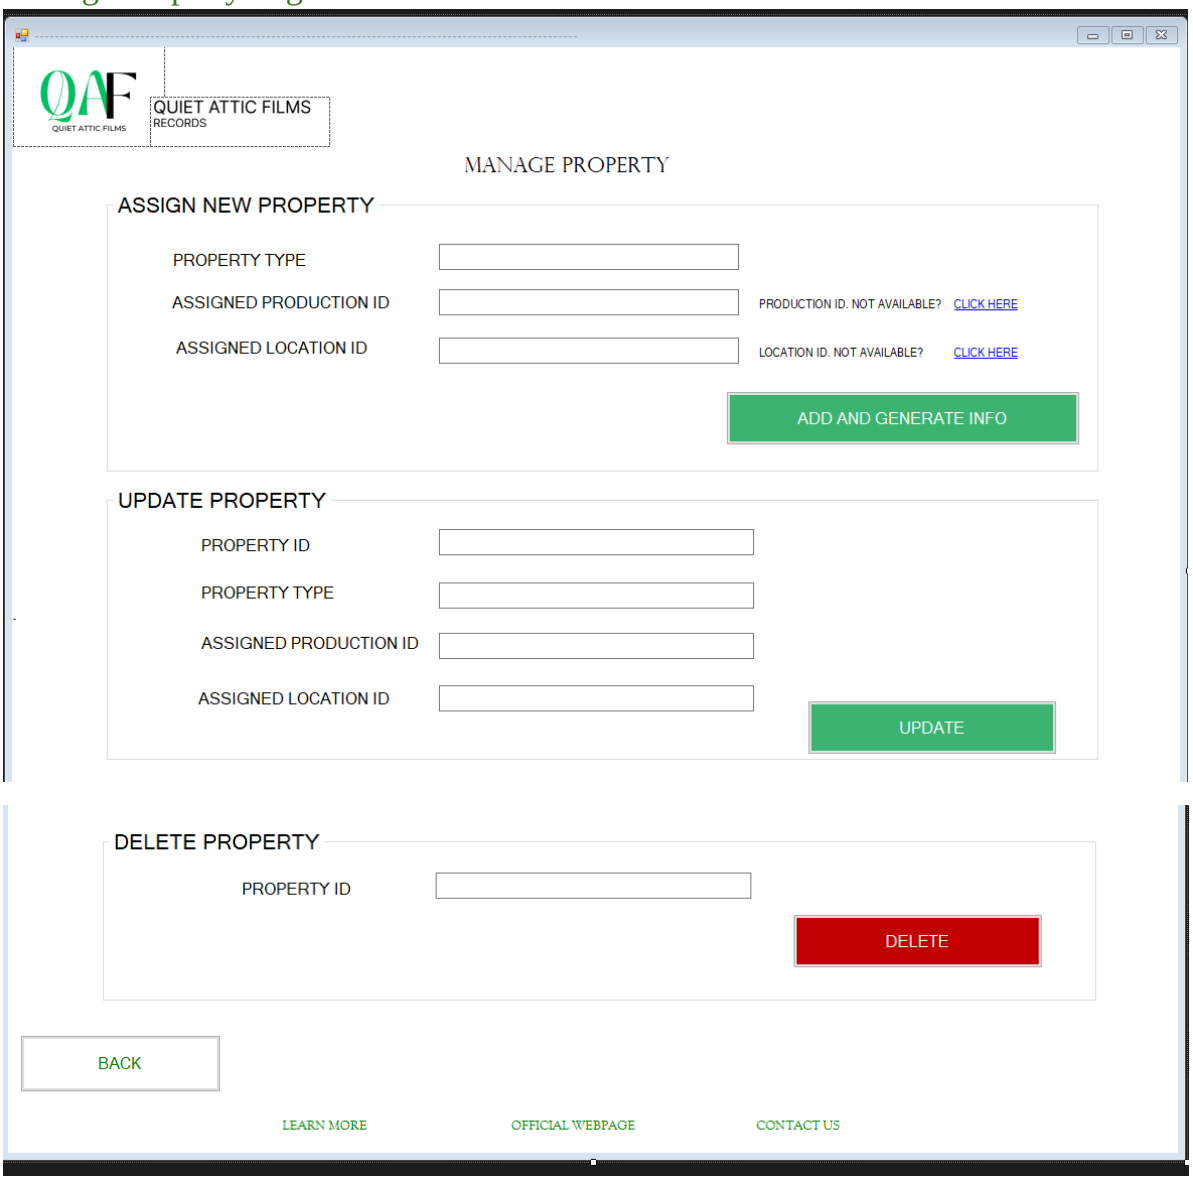

Figure 8 - Manage Property Page

Here the user can manage property data in the database.

The below pages are output pages which will be displayed when data are successfully inserted, updated and deleted.

Data Successfully Added Page

Test Plans Implemented to Quiet Attic Films

Test 1 - Login To the system

Test No -01
Login To the System (Admin)
Predefined Function – There will be a start page where the user clicks a button which will lead to the login page of the system.
Post defined Function – The interface will lead to the page where the user can select the desired entity to manage and view data.
Steps I. Insert the Admin ID and the password in appropriate boxes. II. Click the “ENTER” button.
Expected results **I.** If the Admin ID and password is correct, the interface will show the page to select entity to manage. **II.** If the Admin ID and password are incorrect, there will be an error message.

Tester – Lazan Warshath
Test result – Satisfied
Date - 17/07/2023

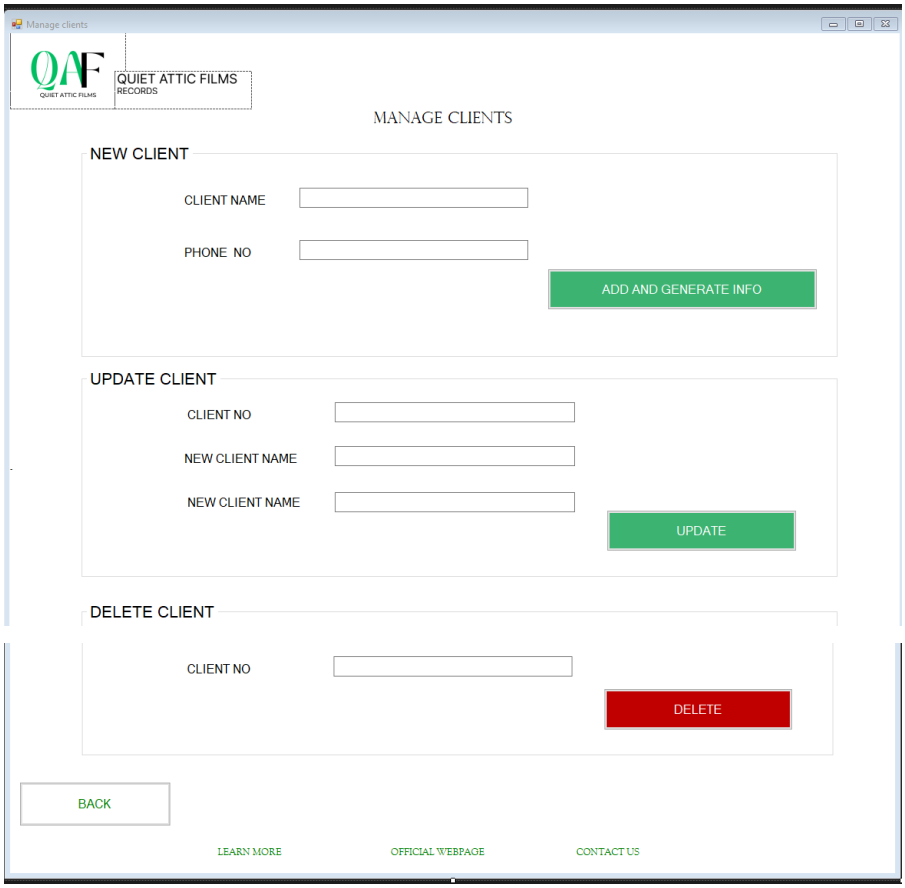
Test 2 - The whether the Selecting page lead the interface to the desired page

Test No -02
The Selecting page lead the interface to the desired page
Predefined function – The user will be entering the admin ID and password in order to verify the user.
Post defined function – The user will be guided to the desired management page according to the entity the user needs to manage. The user can also go to the view data page if he selects the "VIEW DATA" button
Steps Click the button of the entity the user needs to manage.      *Figure 17 Selecting page led the interface to the desired page (Test 2)*

Expected results

I. The interface lead the user to the desired page

Result



Tester – Lazan Warshath

Test result – Satisfied

Date - 17/07/2023

Test 3- Testing the View data page

Test No -03
Testing the View data page
Pre-Defined function – The user selects the “VIEW DATA” button in the selection page which leads to the view data page.
Post defined function – The user can enter the unique ID or No., select the entity to extract the data and view.
Steps I. Select the desired entity that the data needed to be extracted II. Enter the ID/No, III. Click “VIEW”

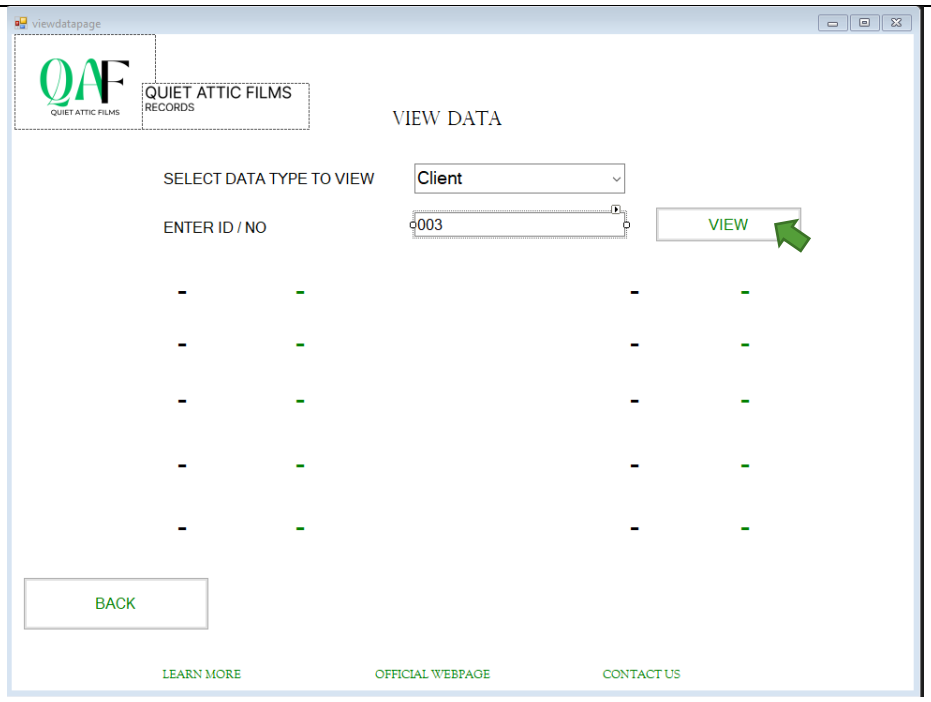


Figure 18- Testing the View data page

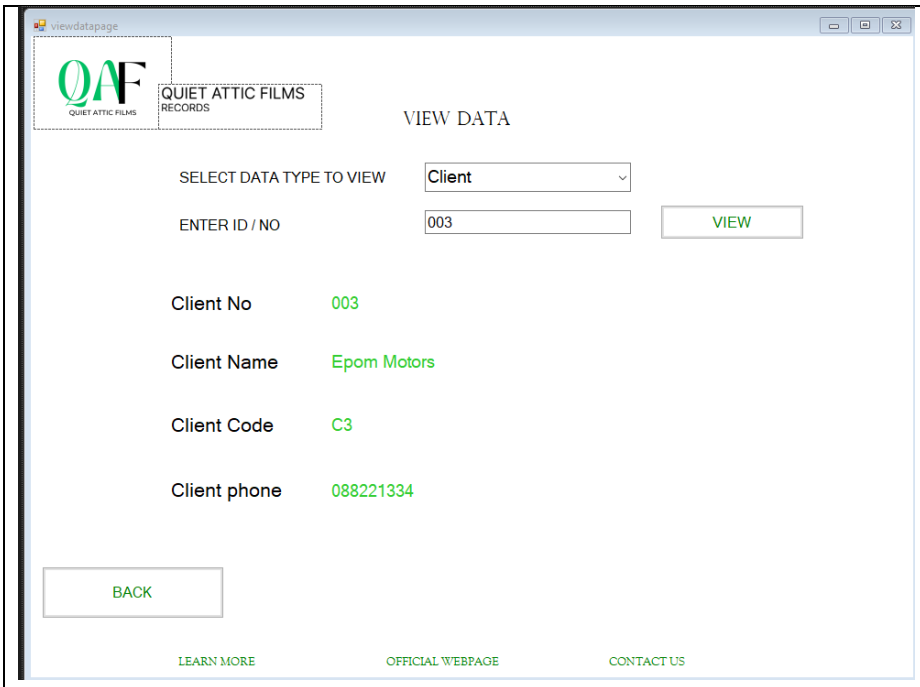
Expected results

The required information will be extracted.

Results



Tester – Lazan Warshath
Test result – Satisfied
Date -17/07/2023

Test 4- Inserting Client data (Alternative to production, Staff, property and location pages)

Test No -04
Testing Inserting Client data (Alternative to production, Staff, property and location pages)
Predefined function – The user selects the desired entity to manage the data through the selection page.
Post defined function – The user will insert data successfully and receive a confirmation
Steps I. Fill the boxes with necessary data to input. II. Click “Add generate Info”

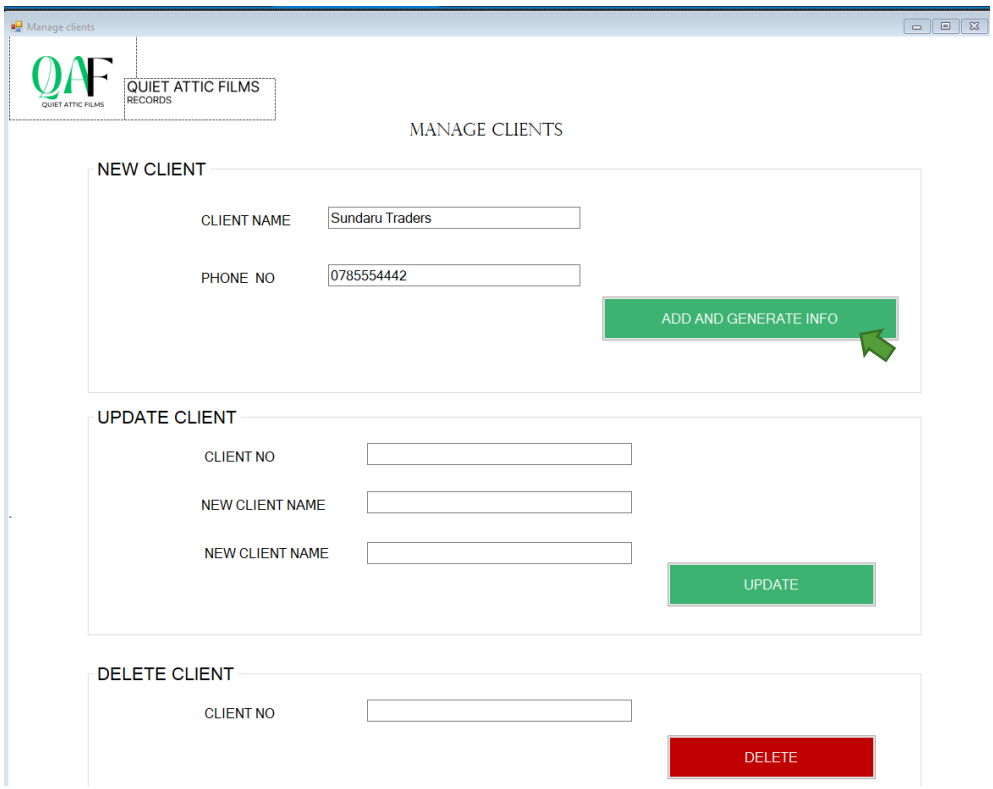


Figure 19- Insert test

Expected results

Get a confirmation screen
